

Looking for a smooth ride in rough conditions?

Dual Compound fork seal kit for motorcycles

Motorcycle fork seals are a vital protective part of the overall front suspension system, with a crucial impact on riding comfort and trouble-free operation in the harshest environments.

This completely redesigned kit – adding on to SKF's well established fork seals range that has already been available on the market for 10 years – consists of two newly developed rubber compounds and new geometries for both the scraper lip and the sealing lip.

The co-moulded combination of compounds, together with improved sealing lip properties, offers enhanced followability on the shaft. In addition, there is a new metal insert and an open wound spring on the dirt scraper lip, effectively preventing the ingress of contaminants. Benefits of the dual compound fork seals are:

- Extended sealing capability
- Improved contamination exclusion
- Reliable protection of the interior fork mechanism
- Minimum friction for enhanced vehicle control

Our Dual Compound fork seal kits come along in a custom-made colour style and are available in various dimensions for high-end motorcycle forks
