

For: Honda SH 125 01'-05', SH 125 06'-07', SH 150 01'-05', SH 150 06'-07"

The DNA High Performance filter P-H1SC07-01 is designed to replace the SH 125/150 stock replacement filter,
To install or later remove your DNA filter for cleaning it, please follow the detailed info listed below:
(we recommend that the installation should be carried out by a trained mechanic)

1. Unbolt the side of the airbox to access the stock filter.

Carefully remove the stock filter.

Clean the airbox carefully, removing all the debris.

2. Remove from the air box the stock foam **O-ring** that seals the stock filter.

You will not need it as the DNA filter has a rubber O-ring part that seals in the air box groove.

Attention !!! : if the foam O-ring is not removed the filter will not sit properly in the air box, the air box cover will NOT close and possible damage to the engine will occur.

3. Install the DNA filter in the airbox carefully.

Check that the filter is located properly in place.

Carefully close and bolt the side of the airbox and the installation is completed.

Follow the Service Kit Instructions to service.
Re-install following the installation procedure again.
