

The DNA High Performance filter P-K6N06-01 is designed to replace the KAWASAKI stock replacement FOAM filter and the plastic frame.
The DNA can be used for road, Off road and race use.

To install or later remove your DNA filter for cleaning it, please follow the detailed info listed below:
(we recommend that the installation should be carried out by a trained mechanic)

1. Remove the stock filter from the bike following the instructions found in the Kawasaki service manual.

Pay attention to remove carefully the old filter, so no debris falls in the clean side of the air box.

ATTENTION: Do not drop the bolt in the air box.

2. Before installing the DNA filter, in the stock Kawasaki air box, apply DNA air filter sealing grease (included) on both sides of the filter and on the O-ring, to help the filter slide in place and seal perfectly.

See photos below:

Side A

Side B

3. Install the DNA filter in the air box and secure it using the stock Kawasaki bolt (do not over tighten!)

Service instructions:

ATTENTION: Follow the DNA Service Kit Instructions carefully to service (not included with the filters).
