

INSTALLATION INFO for DNA filter P-Y12E10-01
For: XT 1200 Z SUPER TENERE 2010'

The DNA High Performance filter P-Y12E10-01 is designed to replace the XT 1200 Z SUPER TENERE stock replacement paper filter without any modification and can be used for road and off road use.

To install or later remove your DNA filter for cleaning it, please follow the Yamaha Service Manual instructions and the DNA additional info listed below:

(We recommend that the installation should be carried out by a trained mechanic)

1. Follow the Yamaha Service Manual air filter removal instructions and remove the stock filter.
Clean carefully the dirty side of the air box using a vacuum cleaner and following wipe it with a clean cloth.
CAUTION: do not use pressurized air as dirt will enter the engine and possible damage will be caused.

2. Before installing the DNA filter you must apply DNA air filter sealing grease (supplied with the filter) all around the groove that the filter sits in. The groove is located in the lower side of the air box and we have colored it in yellow so you can clearly see it in the photo below:

NOTE: we recommend using latex gloves to apply the sealing grease.

3. Install the DNA filter, close the top of the air box and tighten the screws carefully, do not over tighten! **the center screw !**
Follow the Yamaha Service Manual instruction the reassembly the bike and you are done.

The above procedure should be followed every time the filter is removed for servicing.
This DNA filter should be serviced every 12.000 – 15.000 km or once every year for road use
and every 8.000 km for off road use.
Always use the Genuine DNA service kit (includes detailed info) to service the DNA High Performance Filter.
