

The DNA High Performance filter R-KT6SM07-0R is designed to replace the KTM 690 SM stock replacement paper filter element and is designed for road and race use.

To install or later remove your DNA filter for cleaning it, please follow the detailed info listed below:
(we recommend that the installation should be carried out by a trained mechanic)

1. Remove the stock filter from the bike following the instructions found in KTM's service manual.

Pay attention to remove carefully the old filter, so no debris falls in the clean side of the air box.

After removing the old filter clean carefully the air box removing all the debris.

2. Apply DNA air filter sealing grease (included) around the sealing surface Side A' first and then Side B' as photos below:

Push carefully the DNA filter all way down the air box,

pay attention to the top side(see photo)

and slide back the plastic retaining frame (following the instructions found in KTM's service manual).

Attention: check that the plastic frame has all 4 tabs secured in place and the filter does not move!

4. Close the air box cover, secure the 3 bolts in place, re-install the seat and you are ready to go.

Service instructions: The DNA filter for the KTM 690 SM features an extremely large filtering area that allows a very high flow rate and extended service periods. Depending on the environment the bike will be used the DNA Filter must be removed for cleaning every 15.000 – 30.000 km, if you would like the best performance from your bike.

Follow the DNA Service Kit Instructions to service (not included with the filters).
